

An In-Depth Analysis on Educational and Career Goals

Dataset

A Nimra Tabassum

Advisor: Mr. Sahabzada Betab Badar

Department of Computer Science and Information Technology
Jain (Deemed-to-be) University

This report is submitted for the course of
Fundamentals of Computer Applications (24BCA1C05)

Introduction

The dataset presents a comprehensive analysis of students' education and career choices, focusing on factors such as gender, skill alignment, confidence levels, future goals, and external influences. It includes responses from students of varying genders and ages, providing insights into how these factors affect their academic and career decision-making processes.

1. Demographics

The dataset includes a balance of male and female respondents, with the majority of participants being between the ages of 18 and 22. This age group represents early career decision-makers, which is crucial for understanding their aspirations and confidence levels.

2. Confidence Levels

Confidence in gaining employment and achieving career goals varies across respondents. Students who feel their skills are aligned with their degree show higher levels of confidence, particularly in securing jobs and achieving long-term goals. In contrast, students who report skill misalignment or partial alignment show lower confidence levels, indicating a potential gap in preparation for their chosen career paths.

3. Skill Alignment

The dataset reveals that most students feel their skills are either aligned or somewhat aligned with their degree. However, a significant portion of respondents reported a disconnect between their skills and their field of study, suggesting a need for more targeted skill-building initiatives to ensure better alignment with career goals.

4. Future Goals

Regarding future education and career plans, a notable difference in intentions between genders was observed. Female students were more likely to express plans for further education and to work in the same field as their degree, while male students showed more uncertainty in both areas. This highlights potential gender-based differences in career planning and educational aspirations.

5. Influences on Decision-Making

External factors, such as family recommendations and job market considerations, also play a significant role in students' choices. While many students report making independent decisions, some still cite external influences as important factors in choosing their degree and career path.

6. Key Correlations

The analysis found strong correlations between confidence levels and skill alignment. Students who believe their skills align with their degree were more confident about both securing employment and achieving career goals. Additionally, students who were more confident in their skills also showed a higher likelihood of pursuing further education.

Conclusion

Overall, the dataset emphasizes the importance of skill alignment and confidence in shaping students' educational and career choices. Gender-based differences were observed in educational aspirations and career path preferences, and external influences were found to play a role in shaping students' decisions. These insights can guide educational institutions in providing targeted career counseling, skill development programs, and personalized guidance to enhance students' career readiness and confidence.

What is your name?	What is your gender?	How old are you?	What influenced your choice of degree the most?	Did you choose this degree based on personal interest?	How much did job market demand impact your decision?	Was your degree choice influenced by recommendations from others?	Did you consider any alternative degree programs?	Do you feel your skills align with your current degree?

Are you actively developing skills outside of your curriculum (e.g., internships, online courses)?	Do you participate in extracurricular activities related to your field?	How confident are you in gaining employment in your field after graduation?	What is your preferred career path after graduation?	Do you plan to work in the same field as your degree?	Where would you prefer to work after graduation?	Do you intend to pursue further education?	Who has been the biggest influence on your career goals?	How important is work-life balance in your career choice?	Do you believe your degree will prepare you for your chosen career?	How confident are you about achieving your career goals?
